# Disclaimer Regarding Forward-Looking Statement

- This material contains forecasts, projections, goals, plans, and other forward-looking statements regarding the Company's financial results and other data. Such forward-looking statements are based on the Company's assumptions, estimates, outlook, and other judgments made in light of information available at the time of disclosure of such statements and involve both known and unknown risks and uncertainties. Accordingly, forecasts, plans, goals, and other statements may not be realized as described, and actual financial results, success/failure or progress of development, and other projections may differ materially from those presented herein.
- Information concerning pharmaceuticals and medical devices (including those under development) contained herein is not intended as advertising or as medical advice.
- The figures in this document are rounded down to the nearest million yen, and percentages are rounded to the nearest whole number. As a result, there may be discrepancies in the total figures.

| (million yen)                                                                                  | FY2025 | FY2026  |              |          |               |

### Additional Remarks

- Net sales increased mainly due to higher contract revenue.
- Cost of sales ratio (excluding contract revenue) improved due to a favorable product mix.
- R&D expenses increased year on year and exceeded the plan, primarily due to the concentration of certain global clinical trial costs in the current period, and higher CRO-related expenses.
- Non-operating income increased mainly due to the recording of compensation income and foreign exchange gains.
- Non-operating expenses increased mainly due to higher interest expenses.

| Net Sales                                       | Q1 FY2025 YTD | Q1 FY2026 YTD | Difference |

## Additional Remarks

- GROWJECT™ sales decreased year on year, partly due to the impact of the April 2026 NHI drug price revisions. Although sales fell short of the quarterly plan, JCR continues to aim to achieve the full-year plan.
- The number of patients treated with IZCARGO™ increased ahead of plan.
- TEMCELL™ HS Inj. remained solid against plan.
- Treatments for renal anemia posted sales in line with the supply plan for Kissei Pharmaceutical Co., Ltd.
- Agalsidase Beta BS I.V. Infusion [JCR] sales were in line with the supply plan for Sumitomo Pharma Co., Ltd.
- Contract revenue increased mainly due to receiving an option payment under the existing agreement.

Based on discussions with the PMDA, we aim to achieve regulatory filing by the end of 2026 leveraging overseas clinical data

## 1 Development timeline

By end-2026

ODD, MAA

**By end-2027**

**Approval  
Commercial Launch**

## 2 Clinical study in Japanese patients

- Evaluation of pharmacokinetics and safety
- **Conduct independently** of the Japanese regulatory filling and review process
- Initial CTN already submitted

### Clinical Study Overview (Phase 2)

#### Study Design

- Open-label, single-arm

#### Objective

- Collection of pharmacokinetic and safety data in Japanese patients with DMD

#### Target Enrollment

- 20 patients (10 ambulatory, 10 non-ambulatory)

#### Age Range

- $\geq 6$  to  $< 18$  years

#### Treatment Duration

- 6 months

Only two therapies approved in Japan (excluding steroid therapy)

|                      | Approval status |    |    | Target DMD Patients <sup>1</sup>                                                                      |

**Eligible patients remain limited by age and genetic mutation criteria,  
leaving substantial unmet medical needs in DMD**

|                   |   |   |                |                                                                                       |
|-------------------|---|---|----------------|---------------------------------------------------------------------------------------|
| <b>Givinostat</b> | — | ✓ | ✓ <sup>2</sup> | US;<br>≥6 years<br>EU;<br>Ambulatory patients ≥6 years on concomitant steroid therapy |
|-------------------|---|---|----------------|---------------------------------------------------------------------------------------|

AAV, adeno associated virus; DMD, duchenne muscular dystrophy

1. Based on labels for each product

2. Conditional approval

3. Patients who have a confirmed mutation of the DMD gene that is amenable to exon 53 skipping

## Givinostat

US;  $\geq 6$  years  
EU; Ambulatory patients  $\geq 6$  years on concomitant steroid therapy

### Breakdown of DMD patients in Japan<sup>1</sup>

‘Ambulatory patients  $\geq 6$  years’  
 **$\geq 1,000$  patients**

Treatment cost; JPY 50 million/year<sup>2</sup>  
Assuming 70% of eligible patients  
receive treatment

**Estimated Revenue:**  
**JPY 35 Billion**

DMD, duchenne muscular dystrophy; JPY, Japanese yen

1. Company estimated based on ‘Kawai M. *No To Hattatsu*. (Japanese) 2013;45(Suppl.):S324’, ‘Remudy (Registry of Muscular Dystrophy)’ and ‘Nakamura H et al. *Orphanet J Rare Dis*. 2013;8:60’

2. Estimated based on overseas treatment costs of givinostat (Company analysis)

## IZCARGO™

- MPS II enzyme replacement therapy utilizing J-Brain Cargo®, a proprietary BBB-penetrating technology
- Approved in Japan and launched in 2021

Entered into a marketing and distribution agreement with Taiba Middle East FZ LLC to expand business utilizing Japanese marketing authorization

**July 2026**

**Obtained marketing authorization in the UAE**

Seek marketing authorization for IZCARGO™ in countries across the MENA region, with Taiba responsible for sales and distribution in the relevant territories

## GROWJECT™

| Indication                                                                      | Dosage                 |
|---------------------------------------------------------------------------------|------------------------|
| Short stature due to growth hormone deficiency without epiphyseal closure       | 0.175 mg/kg/week       |
| Short stature associated with Turner syndrome without epiphyseal closure        | 0.35 mg/kg/week        |
| Adult growth hormone deficiency (limited to severe cases)                       | 0.021~0.084 mg/kg/week |
| Short stature due to small for gestational age (SGA) without epiphyseal closure | 0.23~0.47 mg/kg/week   |
| Short stature associated with SHOX deficiency without epiphyseal closure        | 0.35 mg/kg/week        |

For daily growth hormone products, **dose adjustment according to patient treatment response is permitted outside of Japan**

(In the US, dose adjustment is allowed within the range of 0.175–0.3 mg/kg/week)

To bridge the gap between Japanese and international dosing practices and to improve final adult height and quality of life (QOL), **JCR has initiated development of an adjustable dosing regimen for growth hormone therapy in Japan**

JR-471

BBB-penetrating  $\alpha$ -L-fucosidase (rDNA origin)

Potential indication: Fucosidosis

## – Fucosidosis

- Etiology: Caused by reduced activity of the metabolic enzyme  $\alpha$ -L-fucosidase
- Clinical features: psychomotor symptoms, muscle hypotonia, visceromegaly, and skeletal abnormalities, etc.
- An ultra-rare disease with **fewer than 120 reported cases worldwide**
- **No approved therapies available**

Given the extremely limited existing clinical data, a global natural history study has been initiated to accumulate data

### Overview

#### Study title

- A Retrospective and Prospective Natural History Study of Patients With Fucosidosis

#### Objective

- To learn more about fucosidosis, its symptoms, and how it develops over time

#### Study period

- Mar 2026 ~ Jan 2031 (planned)

#### Target number of patients

- 57

#### Countries

- Planned to be conducted in the U.S. and multiple other countries

#### Clinical Trials.gov

- [NCT07615400](https://clinicaltrials.gov/ct2/show/study/NCT07615400)

## J-Brain Cargo®

- Alexion, AstraZeneca Rare Disease (Neurodegenerative disease, oligonucleotide therapeutics)
- Angelini Pharma (Epilepsy)
- Acumen Pharmaceuticals, Inc. (Alzheimer's disease)

## JUST-AAV

- Alexion, AstraZeneca Rare Disease
- Modalis Therapeutics Corporation

## Menagen Pharmaceutical Industries LLC

- Out-licensing of local marketing authorizations and commercialization rights for Agalsidase Beta BS (Nine MENAT markets)

**Platform  
licensing**

**Asset  
licensing**

## MEDIPAL HOLDINGS CORPORATION

- Out-licensing of therapies for ultra-rare diseases (JR-471, JR-446, JR-479)

**Global  
Expansion of  
Japan-approved  
products**

**High  
Value-Added  
Contract  
Manufacturing**

## SanBio Co., Ltd.

- Contract manufacturing for pilot production toward commercial manufacturing of Akuugo®

**Strategic in-  
licensing of rare  
disease therapies**

## Italfarmaco S.p.A.

- In-licensing of givinostat for duchenne muscular dystrophy
- Strategic collaboration in rare disease therapies

## Additional Remarks

- Net sales are forecast to exceed the previous fiscal year, mainly due to higher contract revenue.
- SG&A expenses are forecast to increase, mainly due to higher fees and commissions. R&D expenses are also forecast to rise, reflecting progress in global and domestic clinical trials.
- Operating profit is forecast to increase, as higher sales will offset higher expenses.
- Ordinary profit and profit attributable to owners of parent are forecast to decrease, as foreign exchange gains, gains on sales of securities, and subsidy income recorded in the previous fiscal year are not expected this fiscal year.

| Net Sales                                       | FY2025 | FY2026 (Forecast) | Difference |
|-------------------------------------------------|--------|-------------------|------------|

## Additional Remarks

- GROWJECT™ sales are forecast to decrease due to NHI drug price revisions, despite sales volume remaining largely unchanged.
- IZCARGO™ sales are forecast to continue increasing, driven by an increase in treated patients.
- TEMCELL™ sales are forecast to decrease due to changes in the competitive environment.
- Renal anemia products and Agalsidase Beta BS I.V. Infusion [JCR] are forecast to remain solid, with sales in line with supply plans for distribution partners.
- Contract revenue is forecast to exceed the previous fiscal year, driven by new product out-licensing agreements and progress in existing joint research projects.

# Givinostat

DMD, Duchenne muscular dystrophy; HDAC, histone deacetylase.

Givinostat is a potent pan-HDAC inhibitor

Inhibition of the upregulated HDAC in DMD **redresses the imbalance in muscle homeostasis**, leading to<sup>1,2</sup>:

- **Increased** muscle repair and regeneration mechanisms<sup>3,4</sup>
- **Reduced** fibrosis and fat deposition<sup>3</sup>
- **Delayed** disease progression with preservation of functional capabilities<sup>5,6</sup>

**Givinostat reduced fat fraction** in 5 key muscles important for ambulation comprising the quadriceps and hamstrings groups compared with control at 72 weeks

Fat fraction in quadriceps and hamstrings muscles\*

\*P-values are nominally significant, but not statistically significant.

BFLH, biceps femoris long head; LS, least squares; SD, standard deviation; ST, semitendinosus; VL, vastus lateralis.

Vandenborne K. Oral presentation at Muscular Dystrophy Association Clinical & Scientific Conference; March 19-22, 2023; Dallas, TX, USA.

The images on the slide are from a single patient and may not be representative of all patients in EPIDYS.

- At week 72, givinostat plus corticosteroids reduced the decline in time to perform the 4SC test by 1.78 s when compared with placebo plus corticosteroids

\*Data are means and 95% confidence intervals. The confidence intervals have not been adjusted for multiplicity and should not be used for hypothesis testing. Baseline mean values were 3.39 s and 3.48 s for the givinostat and placebo groups, respectively. All patients were also receiving systemic corticosteroids in a dose and regimen that was to remain unchanged over the follow-up period.

4SC, 4-stair climb; GLS, geometric least squares; s, seconds.

1. Mercuri E et al. *Lancet Neurol.* 2024;23(4):393-403.

- Patients receiving givinostat plus corticosteroids (SoC) preserved their ability to walk for an additional 2.9 years (HR, 0.42; 95% CI, 0.23-0.76;  $P=0.004$ ) compared with patients receiving SoC alone

| Parameter                               | Givinostat (n=142) | Control (n=142)     |
|-----------------------------------------|--------------------|---------------------|
| <b>Patients, n (%)</b>                  |                    |                     |
| Assessed                                | 142 (100)          | 142 (100)           |
| Who lost ambulation                     | 14 (9.9)           | 39 (27.5)           |
| Censored                                | 128 (90.1)         | 103 (72.5)          |
| <b>Age at loss of ambulation, years</b> |                    |                     |
| Median (95% CI)                         | 18.1 (18.09, NE)   | 15.2 (14.70, 18.31) |
| P-value                                 | 0.004              |                     |
| HR (95% CI)*                            | 0.42 (0.23, 0.76)  |                     |

\*HR and associated 95% CI and  $P$  value are obtained from a Cox proportional hazards model, including the treatment group as an independent classification factor.

HR, hazard ratio; NE, not estimable; SoC, standard of care.
